QuickFire Business Systems

Barcoding is here to stay!   It quickens up your product selection, is more accurate, and makes your business more efficient.   The effect is immediate, and it pays for itself in no time!

Did you know you can have barcode scanning with Sybiz Vision ®?   Maybe you would like to have barcoding, but starting off is too difficult.   Here are some common reasons for not using barcoding: -

- "I'd like to, but where do I start?"

- "Some of my products have barcode numbers but many do not.   What about those without numbers?"

- "Some product barcodes are duplicates.   How do you get over that problem?"

- "(As a wholesaler) My retailers want international standard barcode numbering.   How do I handle that?"

No problems!   QBS Barcoder 2003 will carry most of the load for you!

Created exclusively to work with Sybiz Vision, QBS Barcoder has proved its value to Vision users for more than 5 years.   It has recently been upgraded, with more features, greater convenience and **is compatible with all versions of Vision.   This version is compatible with XP and Vista and is suitable for both Australia and New Zealand Taxation systems.**

Here's what it does….

QBS Barcoder 2003 is a stand-alone programme which connects automatically to your Vision files, to

- **Number any products which do not have an international standard (UPC/EAN) barcode.** It does this one-at-a-time, or by one button click to do the whole inventory. Registered barcodes (EAN member companies) and "In-House" numbers (for Non-members) are both catered for.   Existing barcode numbers are carefully checked and identified as to type.

- **Print barcoded labels for products, shelves, catalogue pages, bin locations, and much more.** A good range of Laser and Thermal printer labels is available.   Barcode fonts are included.   Prices on labels can be shown or hidden, by specific settings.   Customer Delivery labels, printed from your Debtors Ledger records is an added feature.

- **Product selection for labels is by scanning a barcode, entering a Product Code, selecting by Product Name, or from a selection of Purchase orders or Purchase Invoices.**

- **Product Serial numbering and labelling is an optional extra.**

- **Label customisation is available**, by specific quotation.

- (Note. Minimum hardware and operating system requirements apply)

For pricing and full details, visit the **QBS Barcoder website**, at **www.qbsbarcoding.com** , or contact your Sybiz Solution Providor.   To discuss your requirements, why not contact your Sybiz Solution Providor, (or Lester Vincent, on **0416 081 260)** or send an e-mail direct from the website.
